

Raymond Mill for Petroleum Coke Powder Making

Specializing in the field of petroleum coke powder making, Guilin Hongcheng has created a new type of Raymond Mill, namely the HC Vertical Pendulum Grinding Mill through the technology upgrades and innovations. Compared with the traditional Raymond Mill, this kind of equipment covers a number of technology patents, and the performance of the entire equipment has been greatly improved.

As ideal equipment for powder making, the application value of Raymond Mill is relatively high. Combined with the usage and market value of petroleum coke, this new type of Raymond Mill not only improves the powder-making efficiency of petroleum coke, but also reduces energy consumption. Hence, it is desirable equipment for enhancing the market value of petroleum coke and expanding application field of petroleum coke.

It is believed that with the further development of the petroleum coke market, the application of Raymond Mill will be more popular.
